PARA·KEET MPP Software

REVIEWER GUIDE & INSTRUCTION MANUAL — NM MEDICAL PSILOCYBIN PROGRAM

Prototype for review
Grounded in SB219 (2025)
7.35.2 & 7.35.3 NMAC
October 2026

Parakeet is **two linked tools**: a public **Policy Console** that compares the New Mexico, Colorado & Oregon programs side by side, and the role-based **MPP Software** that runs the actual compliance workflow — applications, chain-of-custody, lab COAs, §9 reporting, adverse-event surveillance and the DOH review queue. Everything below is clickable in your browser; no login, and demo data is stored only on your device.

1 · Policy Console
clinical-trials.github.io/Parakeet/
Cross-state comparison for policymakers.

2 · MPP Software (app)
clinical-trials.github.io/Parakeet/app.html
The working compliance platform.

A. Policy Console — how to use

Shift states. Drag the gear (or click **New Mexico / Colorado / Oregon**) at the top. The **hero photo**, title and badge change so you always know which program you are viewing.

Read the badge. Each state shows its model and **start year** — NM **Launching 2026** (medical), CO **Live since 2025**, OR **Live since 2023** (both non-medical).

Access model. CO & OR: any adult 21+, via a licensed facilitator, **no diagnosis and no residency requirement**. NM: **medical** — qualifying diagnosis + certifying clinician.

Dig in. Program explainer, readiness path, roles & fees, substances, reporting, and the full **Colorado rules (1 CCR 213-1)** hosted on the site.

B. MPP Software — pick a role

Use the **role selector** (top-right of the app) to see exactly what each user needs — nothing more.

Role	What they do
DOH reviewer	To-do dashboard, **review queue with a 30-day decision clock**, §9 outcomes, safety signals, equity, lab certification, custody.
Patient	Plain-language steps, start/track an enrollment application.
Clinician	Certify a patient, record §9 sessions, outcomes, research funding, report AEs.
Facilitator	Chain-of-custody, session reporting, adverse-event reporting.
Producer	Permit application, custody, request a lab **COA**.
Lab	Testing workflow — record a COA against a producer batch.

⚠ **Adverse-event reporting is pinned to the top of every page** for clinician, facilitator (report) and DOH (monitor). Serious events → one tap, report within 24 hours.

C. 5-minute reviewer walkthrough

1. Open the **Console**. Shift **NM → CO → OR** — watch the hero, badge & facts change per state.
2. Open the **app**. Set role to **DOH reviewer**. Read the **to-do list** (deadlines + process still to finish).
3. Go to **Review**. Five seeded producer applications are waiting — note the **30-day decision clock**; approve or request info.
4. Go to **Research**. See the **outcomes visualization** — 8 validated measures as baseline→follow-up bars, by diagnosis, durability to 12 months.
5. Switch role to **Producer**. Submit a permit, then open **custody** and **"Do a COA"** to connect to a testing lab.
6. Switch to **Clinician** or **Facilitator**. Use the red **Report an adverse event** bar at the top; file a tiered AE.
7. Switch to **Patient**. Confirm the experience is simple — qualify, apply, track; no jargon.

D. What to look for

Compliance-first. Every form cites the governing rule (7.35.2 / 7.35.3 NMAC); the DOH receives clean, consistent data by default.

Patient-first order. Roles are simplified to only what each needs; safety reporting is never more than one tap away.

Honest about status. No NM lab is permitted yet, so every COA shows **Pending**; outcome figures are clearly labeled **illustrative** until real §9 data exists.

Privacy. De-identified aggregates only; demo data stays in your browser and is never sent to the state.

Prepared by Parakeet Software. Prototype for review — not an official State of New Mexico, Colorado, or Oregon document, and not legal advice. Program provisions reflect public sources (SB219; 7.35.2 & 7.35.3 NMAC; CO 1 CCR 213-1; OR ORS 475A / OAR 333-333) as of October 2026 and may change — verify against current rule text. FDA has not approved psilocybin. Demo data is local to your device.
